Bank depository automation and control

Timely cash delivery and collection in bank branches and other cash collection and withdrawal points is not the easiest logistical task. The automation of operational processes between central and regional repositories ensures increased availability of funds and the quality of services across the whole cycle of cash turnover. Modern control systems of cash circulation allow maximum work optimization for these structural bank units. The implementation is possible due to effective means of monitored cash flows, centralized collection management and provided comprehensive analytical reporting.

BS/2 offers the complete software solution Vaultⁱ⁰, which is a functional module of the Cash Managementⁱ⁰ system allowing to manage as efficiently as possible even the most difficult internal processes specific to cash storage.

The main functionality of Vault^{,io}:

- Monitoring cash in a separate bank repository and the entire network.
- Cash limits control for each currency and denomination.
- Requests' for collection registration, confirmation and tracking of the execution.
- Events logging and reporting on each object and the
- whole network.

Flexible system of roles and user access rights.

- Registration of worn or damaged currency notes.
- Separate registration of the night depository's transactions.

Workflow of cash delivery request

The main elements of the operator interface of the Vaultⁱⁿ system:

Monitoring

- Current cash balances display at each point in real time.
- Display of planning cash replenishment to or delivery from the bank repository.
- Proactive notifications of reached limits for currencies and denominations at each point.
- Display of the worn or damaged currency notes' amount in every point and throughout the system.

Night depository

- Cash transactions accounting after the trading day closing.
- Controlling the transfer of accepted cash to the balance of the next business day.

CIT orders

- Creation of a request for delivery and withdrawal of cash.
- Control of the request execution at all stages.
- Control of cash collection teams.
- Accompanying documents generation.
- View the history of completed requests and reporting.

Logs and Reports

- History display of all performed operations: Start of day, End of day, Cash Order, Order confirmation, etc.
- Ability to generate various reports about completed operations.

Cash Management^{ia} is a software product of the .iQ family, designed to solve the problem of efficient cash distribution: ATMs and other self-service devices, as well as in bank repository, bank branches, mail and retail networks.

The solution allows automating the operational processes associated with cash flow and maintain the optimal amount of cash at each cash collection and withdrawal point.
